

ILY Enterprise, Inc. announces the release of its new FlashMAX USB, CF and SD Duplicator series

City of Industry, CA October 30, 2014 ILY Enterprise, Inc. introduces the latest upgraded version of flash media duplicators - FlashMAX USB, CF and SD duplicator series. FlashMAX USB duplicator was first available in October of 2009 and introduced at 2010 CES show in Las Vegas. After years of successful sales of FlashMAX USB duplicator, ILY came out FlashMAX SD and CF duplicators in the beginning of 2013. With technology improvement and continuing effort, now ILY presents the latest version of FlashMAX series duplicator. FlashMAX series duplicator can easily and reliably create multiple copies of your USB and or CF/SD flash media without a computer or cumbersome software. Each channel has dedicated copy throughput of 2GB per min. Asynchronous copy mode allows each channel to function independently and copies directly from built-in memory so there is no need to interrupt a copy cycle as each channel will load, unload and copy independently. Source Analysis feature identifies the content on the master and intelligently copies only the data to speed up the copy cycle. Test function can help to find out the quality and read/write speed of USB and CF/SD flash card/drive. Fast, reliable, convenient and cost-effective to operate, FlashMAX duplicators offer an easy and efficient platform to make multiple copies of your data.

FlashMAX duplicators are the first duplicators on the market that implement asynchronous copy without data and memory size limitation. With SOTA technology built-in, real time copy and compare function can achieve a higher efficiency. Thanks to its revolutionary compact ergonomic design, users can now easily insert and remove flash media saving valuable time and energy.

Potential markets for the FlashMAX duplicators include: marketing, audio/video production, photography, government, education, embedded systems and more. FlashMAX duplicators are available 15, 31 and 39 targets for USB and SD models, and 7 and 15 targets for the CF model.
